Solid stainless steel eco-friendly faucets for the kitchen, bath and outdoor
Rubinetti in acciaio inossidabile massiccio per cucina, bagno ed esterni

ENGINEERED IN SWITZERLAND - MADE IN ITALY

THE IDEA

It was 1997 when Marcello, Giulio and Stephen met on the shores of Lake Maggiore, in Northern Italy at the foot of the Alps. Marcello, a visionary Italian entrepreneur; Giulio, an ingenious industrial designer and Stephen, a dedicated Swiss manager.

Giulio proposed to his friend Marcello to enter the flourishing plumbing industry. In fact, the area surrounding Lake Maggiore is famous for its tourism, history and natural beauty, but what most do not know is that it is also a well developed industrial area that specializes in the faucet industry and, more importantly, in the stainless steel industry.

Giulio, at the time, was already collaborating with local manufacturers of plumbing products therefore he was familiar with the related technical aspects and he also had a vast know-how in the field of metals. The idea was appealing to Marcello, but his passion for unique and eco-friendly products did not permit him to take the easy path. He wanted to create something that would be different: it had to be “the best” product available in the market and it had to be eco-friendly.

The idea of using solid stainless steel was born.

At the time, stainless steel was used for industrial faucets but it was considered too costly and hard to use for domestic taps. Nevertheless MGS selected it because of its numerous advantages and hence extensive research and development began. Once it was decided to move forward with the innovative material, specific technical knowledge, experienced artisans and specialized machinery were required: the local long lasting tradition and proficiency in manufacturing of stainless steel products was fundamental.

Finally, more than a year later, the first stainless steel faucet for domestic use was produced: the Unico. Thanks to Giulio's talent and to Stephen's management, Marcello's idea was an immediate success: many tap manufacturers immediately recognized it as being “the best” faucet in the world.

Since then the product range has been greatly developed. An ample selection of kitchen faucets and accessories and four bath collections were added. Keeping in mind the needs of the consumers, architects and designers, new products are constantly being developed. Just like in the very beginning, we continue to strive to manufacture unique products with excellent quality standards, extreme attention to ecology, details, tolerances and finish.

LA NASCITA DI UN'IDEA

Sul finire del 1997 Marcello, Giulio e Stephen si incontrarono sulle rive del Lago Maggiore per discutere di nuove opportunità industriali. Marcello, un imprenditore; Giulio, un talentuoso progettista; Stephen, un manager svizzero.

Giulio, già pratico del settore, propose all'amico Marcello di investire nella produzione di rubinetti: industrie ferventi nella zona del lago altrimenti universalmente noto per le sue isole, la lussureggiante vegetazione, la bellezza del paesaggio e le dimore principesche. Invogliato, Marcello si informò sul materiale e sulle fasi di lavorazione concludendo di non essere interessato a investire in una produzione in ottone cromato, inquinante e rischiosa per la salute e per l'ambiente: nacque così l'idea di produrre, primi al mondo, rubinetti in acciaio inossidabile per uso domestico.

All'epoca l'acciaio inossidabile era adoperato nella produzione di rubinetteria ad uso industriale, mai nel domestico.

Un anno di ricerca e sviluppo permise di mettere a punto UNICO: il primo rubinetto in acciaio inossidabile per cucina. L'innovazione raccolse il plauso del mercato in un periodo in cui incominciava già a manifestarsi un forte interesse per l'ecologia: in molti asserirono che UNICO era il più bel rubinetto al mondo.

Negli anni successivi la gamma è stata ampliata con l'aggiunta di nuovi modelli per cucina e bagno, rispettando la filosofia iniziale di altissima qualità, grande precisione, tolleranze infinitesimali, rispetto dell'ambiente e finiture impeccabili.

PENTA

COLLECTION

Design by ErvasBasilicoGirardi

Stainless steel itself seems to soften into a twisting motion, resulting in five concave facets that form a pentagon. An attractively ergonomic shape that you will enjoy grasping and using daily. Penta - an elegant and timeless collection.

L'acciaio stesso sembra ammorbidirsi e torcersi creando 5 sfaccettature concave, che a loro volta formano un pentagono. Ergonomia, eleganza del design e matericità dell'acciaio rendono Penta una linea senza tempo, al di fuori da mode e tendenze.

WHY SOLID STAINLESS STEEL?

The beauty and features of stainless steel made it the perfect choice for many sculptures and landmarks such as the pinnacle of the Chrysler building in New York, the Gateway Arch that defines the St. Louis skyline and the Atomium in Brussels. The same characteristics make it the best choice for many industrial and commercial applications including production of high quality fixtures for the bathroom, kitchen and outdoors.

In 1998 MGS manufactured the very first stainless steel mixer for domestic use. No other manufacturer before MGS used it for this purpose due to costs and technical difficulties: stainless steel is more expensive than brass and complex to exploit due to its hardness and higher melting temperature. These factors did not stop MGS because the goal was to offer our customers the best possible products.

The following is a partial list of the exceptional advantages that stainless steel offers.

- It is 100% lead free, which allowed MGS to be the first European manufacturer to be certified in compliance with NSF61 Annex G. This also meets the low lead requirements of the U.S. Safe Drinking Water Act, which ent into effect in January 2014.
- The finish is obtained through hand polishing rather than through chemical processes such as chroming or plating. Polished stainless is extremely scratch resistant and durable.
- It is 100% recyclable and a high percentage of it comes from recycled material (approximately 60%).
- Stainless steel does not release nickel and therefore it is ideal for people allergic to it.
- The non-porous surface is more resistant to bacteria and germs making it a more hygienic choice in the kitchen or bathroom.
- It is ideal for outdoor installation as AISI316 marine grade stainless steel is resistant to oxidation.
- It guarantees a long life cycle, making it the least expensive choice in the long run.

Some competitors now use stainless steel sheet or tubes to cover an inner brass body. This shortcut may provide the possibility to keep production costs lower while offering some of the advantages mentioned above, but clearly not all!

I VANTAGGI DELL'ACCIAIO INOX - AISI316

La bellezza, durezza e durata dell'acciaio inossidabile ne hanno motivato la scelta per la realizzazione di strutture architettoniche quali il pinnacolo dell'Empire State Building a New York e il monumentale atomo di Bruxelles. Le caratteristiche estetiche e qualitative fanno dell'acciaio inossidabile un materiale particolarmente adatto per rubinetti da bagno, da cucina e per esterni. Nessun fabbricante l'aveva mai preso in considerazione prima di MGS perché caro e dalla lavorazione complessa.

Questa è una lista delle prerogative che offre l'acciaio inossidabile:

- È completamente esente da piombo, ciò ha permesso a MGS di essere il primo fabbricante europeo a ottenere la certificazione NSF61-G che vieta la presenza di piombo nei rubinetti per acqua potabile. La norma è entrata in vigore il 1° Gennaio 2014 in tutti gli Stati Uniti perché il piombo è un metallo tossico, nocivo alla salute e all'ambiente.
- È 100% riciclabile e circa il 60% di acciaio è ottenuto da prodotto riciclato.
- La finitura è ottenuta tramite lucidatura a mano, più onerosa ma più duratura e meno deteriorabile della cromatura.
- La superficie non porosa resiste a germi e batteri per una maggiore igiene in cucina e in bagno
- Non rilascia nichel ed è quindi indicato per le persone allergiche a questo metallo.
- Particolarmente resistente all'ossidazione, AISI316 è ideale per l'utilizzo all'aperto.
- È la scelta più economica per la sua durata nel tempo.

Alcuni fabbricanti usano rivestire in acciaio i loro prodotti in ottone ma si tratta ovviamente di accorgimenti estetici che nascondono pur sempre un cuore in ottone.

THE GREEN CHOICE

Stainless steel is an eco-friendly material, in fact it is 100% recyclable and approximately 60% of it comes from recycled material. This percentage is expected to increase in the future. In case that, in spite of its high recyclability, a stainless steel object should end into a disposal site, unlike many other metals it will have no damaging effects on soil and water. Unlike typically used brass, stainless steel does not contain any lead, a poisonous metal that is gradually being abandoned for its detrimental impact.

Stainless steel objects have a very long life cycle. Most likely many years from now, when you will be getting tired of the style of your bathroom, your MGS fixtures will still be as beautiful as when you purchased them.

The MGS production process is extremely clean and eco-friendly. A typical fixture is going to be plated to a polished chrome or matte finish, this process produces toxic wastes that must be properly treated. The beautiful and long lasting finish of our stainless steel fixtures is obtained through hand polishing, a completely non polluting process.

L'acciaio inossidabile è ecologico, al 100% riciclabile e circa il 60% della produzione mondiale deriva da materiale riciclato: percentuale destinata a crescere. Diversamente da altre leghe, se dell'acciaio fosse abbandonato in natura non ne deriverebbe nessun danno all'ambiente, al terreno o alle falde acquifere: l'acciaio inossidabile non si deteriora e non inquina.

Il processo di produzione di MGS è pulito ed ecologico: un comune rubinetto viene cromato col rischio di provocare rifiuti tossici dannosi mentre i nostri rubinetti in acciaio inossidabile sono unicamente lucidati a mano. Gli oggetti in acciaio inossidabile sono di durata praticamente illimitata e quando vi sarete stancati del vostro bagno e vorrete rinnovarlo, la vostra rubinetteria in acciaio inossidabile sarà ancora come nuova, inalterata.

*Anna
Anjo!*

OUTDOOR

Being produced in of marine grade stainless steel AISI316, the entire MGS range is ideal for outdoor installation. Stainless steel is extremely resistant to oxidation, but in the event of superficial oxidation, the use of specific stainless steel cleaners can restore the finish to its original flawless state. Chrome plating on the contrary once impaired cannot be restored.

MGS - Timeless beauty indoor and outdoor.

L'intera gamma MGS è in acciaio inossidabile massiccio AISI316, resistente all'ossidazione e pertanto adatta all'installazione all'aperto. Qualora dovessero palesarsi tracce di ossidazione, appositi liquidi per la pulitura dell'acciaio gli restituiscono l'originale brillantezza. Diversamente dall'acciaio inossidabile, le cromature intaccate sono irrecuperabili.

RubINETTERIA MGS, bellezza inalterata nel tempo.

PRODUCTION

As a boutique manufacturer, MGS is driven by: perfectionism, commitment to the highest quality, pride in and passion for the product. Unlike our many competitors, we have never invested in mass production or sought ways to do things faster and cheaper. Combining Swiss engineering standards with Italian design, our goal is to do things better and to be innovative.

Every single part of our faucets is made of solid stainless steel that we shape with computerized machines. The goal of our very strict quality standards is to combine the parts with infinitesimal precision, which will provide for a perfect assembly and a long lasting smooth and flawless use.

Prior to the final assembly the parts are hand polished to a matte or shiny finish by our master stainless steel polishers. This particular procedure requires skills and know-how that are typical of the region where MGS is located.

The seamless finish of the separate parts guarantees that the final product will have an impeccable finish throughout the surface. The faucet is finally ready for assembly and packaging.

Numerous quality controls take place during the process: after machine tooling, polishing, assembly, and final packaging. Every step of the manufacturing process is carefully monitored to ensure that the strictest quality standards are respected.

Our small dynamic team is extremely swift and flexible, which allows us to follow up on special custom-made product requests very quickly.

LA PRODUZIONE

MGS è una boutique della rubinetteria che concepisce e produce rubinetti esclusivi di qualità superiore: non ci dedichiamo né siamo interessati ai grandi numeri che andrebbero a discapito del concetto di produzione limitata ma di altissima qualità.

Combinando lo standard ingegneristico svizzero e il design italiano, il nostro obiettivo è di creare prodotti migliori e innovativi. Le varie parti dei nostri rubinetti sono in acciaio inossidabile che modelliamo con torni elettronici ad alta precisione, ottenendo assemblaggi perfetti per un uso morbido e duraturo del prodotto. Prima dell'assemblaggio finale, le varie parti che compongono il rubinetto sono lucidate a mano da esperti lucidatori che grazie alla loro esperienza e precisione garantiscono al prodotto finito un aspetto omogeneo. Rigorosi controlli di qualità sono effettuati durante tutto il ciclo di lavorazione per accertare che ogni parametro funzionale ed estetico venga rispettato.

CUSTOM MADE

As a boutique manufacturer, we at MGS love to collaborate with architects and designers: a source of inspiration to create innovative products. Our custom made division allows them the freedom to creatively use their knowledge and talents by customizing products which fit the personality and lifestyle of each individual homeowner. We cater to that special customer that craves a unique one of a kind product in their home.

MGS collabora con architetti e progettisti d'interni che sono sempre una sorgente di ispirazione per innovare la nostra gamma. La nostra divisione dedicata ai prodotti speciali permette di dare sfogo alla creatività dei progettisti che possono così esprimere appieno il proprio talento e personalità. MGS è interessata alle esigenze del singolo cliente che desidera dare un tocco di unicità alla propria abitazione.

POLISHED STAINLESS STEEL

All products of the bath collection are also available in polished stainless steel. This elegant finish is obtained through additional refined hand polishing over the matte finish.

FINITURA LUCIDA

Tutti i modelli della collezione bagno sono altresì disponibili in acciaio lucido. Questa elegante finitura è ottenuta tramite un'ulteriore lucidatura a mano successiva alla satinatura.

FINISHES

Black Steel, Titanium, Rose Gold and Gold : these MGS finishes are obtained through Physical Vapor Deposition (PVD). With this process the color penetrates the metal by molecular bonding, resulting in a smooth, long lasting finish. PVD has superior characteristics of durability and hardness, even outdoor in harsh atmospheric conditions. PVD also has an eco-friendly advantage because the process does not produce the chemical wastes that are the result of coating processes. As it is not a coating, a characteristic of PVD is that objects of different shapes and dimensions can absorb color differently, resulting in slight color variations.

FINITURE

Le finiture MGS Black Steel, Titanio, Oro Rosa e Oro Giallo sono ottenute tramite Physical Vapor Deposition (PVD). Con questo processo il colore penetra la superficie dell'acciaio tramite una reazione a livello molecolare che migliora la resistenza della superficie. Il trattamento PVD ha ottime caratteristiche di resistenza e durezza, superiori rispetto a finiture galvaniche e verniciature tradizionali, anche per installazioni outdoor.

Inoltre è un processo che non produce alcun tipo di scarti inquinanti, in linea con la filosofia produttiva MGS.

Poiché non è un rivestimento applicato in superficie, una caratteristica del PVD è che oggetti di diverse forme e dimensioni possono assorbire il colore in maniera diversa, risultando in lievi differenze di tonalità.
