Features

	Mounting hole size
	Horizontal base diameter measurement
	Vertical base diameter measurement
	Ceiling base diameter measurement
	Shower swiveling outlet
	Swiveling outlet
	Waterfall
	Rain
	Vaporizer
	Single waterfall - Rain
	Waterfall
	Airstream
	Massage
	Rain

For further technical drawings please check our website www.mgstaps.com

It was 1997 when Marcello, Giulio and Stephen met on the shores of Lake Maggiore, in Northern Italy at the foot of the Alps. Marcello, a visionary Italian entrepreneur; Giulio, an ingenious industrial designer and Stephen, a dedicated Swiss manager. Giulio proposed to his friend Marcello to enter the flourishing plumbing industry. In fact, the area surrounding Lake Maggiore is famous for its tourism, history and natural beauty, but what most do not know is that it is also a well developed industrial area that specializes in the faucet industry and, more importantly, in the stainless steel industry. Giulio, at the time, was already collaborating with local manufacturers of plumbing products therefore he was familiar with the related technical aspects and he also had a vast know-how in the field of metals. The idea was appealing to Marcello, but his passion for unique and eco-friendly products did not permit him to take the easy path. He wanted to create something that would be different: it had to be “the best” product available in the market and it had to be eco-friendly.

The idea of using solid stainless steel was born.

At the time, stainless steel was used for industrial faucets but it was considered too costly and hard to use for domestic taps. Nevertheless MGS selected it because of its numerous advantages and hence extensive research and development began. Once it was decided to move forward with the innovative material, specific technical knowledge, experienced artisans and specialized machinery were required: the local long lasting tradition and proficiency in manufacturing of stainless steel products was fundamental. Finally, more than a year later, the first stainless steel faucet for domestic use was produced: the Unico. Thanks to Giulio’s talent and to Stephen’s management, Marcello’s idea was an immediate success: many tap manufacturers immediately recognized it as being “the best” faucet in the world. Since then the product range has been greatly developed. An ample selection of kitchen faucets and accessories and three lines of bath taps, showers and accessories were added. Keeping in mind the needs of the consumers, architects and designers, new products are constantly being developed. Just like in the very beginning, we continue to strive to manufacture unique products with excellent quality standards, extreme attention to ecology, details, tolerances and finish.

LA NASCITA DI UN’IDEA

Sul finire del 1997 Marcello, Giulio e Stephen si incontrarono sulle rive del Lago Maggiore per discutere di nuove opportunità industriali. Marcello, un imprenditore; Giulio, un talentuoso progettista; Stephen, un manager svizzero. Giulio, già pratico del settore, propose all’amico Marcello di investire nella produzione di rubinetti: industrie ferventi nella zona del lago altrimenti universalmente noto per le sue isole, la lussureggiante vegetazione, la bellezza del paesaggio e le dimore principesche. Invogliato, Marcello si informò sul materiale e sulle fasi di lavorazione concludendo di non essere interessato a investire in una produzione in ottone cromato, inquinante e rischiosa per la salute e per l’ambiente: nacque così l’idea di produrre, primi al mondo, rubinetti in acciaio inossidabile per uso domestico. All’ epoca l’ acciaio inossidabile era adoperato nella produzione di rubinetteria ad uso industriale, mai nel domestico.

Un anno di ricerca e sviluppo permise di mettere a punto UNICO: il primo rubinetto in acciaio inossidabile per cucina. L’innovazione raccolse il plauso del mercato in un periodo in cui incominciava già a manifestarsi un forte interesse per l’ecologia: in molti asserirono che UNICO era il più bel rubinetto al mondo. Negli anni successivi la gamma è stata ampliata con l’aggiunta di nuovi modelli per cucina e bagno, rispettando la filosofia iniziale di altissima qualità, grande precisione, tolleranze infinitesimali, rispetto dell’ambiente e finiture impeccabili.

GEBURTSTUNDE VON MGS

Im Frühjahr des Jahres 1997 trafen sich Marcello, Giulio und Stephen am Lago Maggiore zu einem Gespräch. Marcello, ein italienischer Unternehmer mit Visionen, Giulio ein ausgezeichnete Industriedesigner, und Stephen, der Schweizer Manager mit dem Hang zur Präzision. Die Region um den Lago Maggiore ist wohl bekannt, für Ihre natürlich Schönheit eines Bergsees eingebettet in die wunderschöne Bergwelt. Aber es ist nur wenigen bekannt, das in dieser Region eine hoch entwickelte Industrie für die Verarbeitung von Edelstahl. Giulio hatte bereits sehr viel Erfahrung in der Verarbeitung von Edelstahl. Marcello empfand die Idee als sehr reizvoll, aber mit seiner Vorliebe für einzigartige und ökologisch wertvolle Produkte war der Weg zur fertigen Produktidee noch weit. Er wollte etwas entwickeln, was besser war als das, was als „bestes Produkt im Markt“ bekannt war, und es musste umweltfreundlich sein von Beginn an. Der Gedanke an die Verwendung von solidem Edelstahl war geboren. Zu dieser Zeit wurde Edelstahl nur für industriell verwendete Armaturen verwendet. Dennoch wählte MGS soliden Edelstahl als am besten geeignet für das neue Projekt. Nach der Entscheidung war die traditionell in der Region verankerte Professionalität in der Edelstahlverarbeitung von fundamentaler Bedeutung. Schlussendlich, nach mehr als einem Jahr harter Arbeit, war die erste Edelstahlaratur für den Hausgebrauch fertig gestellt: Das Modell UNICO. Dank Giulio’s Kenntnissen, Stephens Projektmanagement und Marcello’s visionärer Idee wurde bereits die erste Armatrur ein unglaublicher Erfolg. Viele Hersteller von Armaturen nannten die UNICO die beste Armatrur ihrer Zeit weltweit. Seit diesem ersten Erfolg wurde die Produktpalette kontinuierlich erweitert. In den folgende Jahren wurde das Sortiment um neue Modelle für Küche und Bad erweitert, die zusammen mit Architekten und Designern stetig weiter entwickelt werden. Auch heute noch sind eine exzellente Produktqualität, ein ausgezeichnetes Finish sowie die ökologische Verträglichkeit die Leitlinien bei der weiteren Entwicklung.

L’IDEE

Vers la fin de 1997 trois amis se rencontrèrent au bord du Lago Maggiore aux pieds des Alpes pour discuter d’une nouvelle activité: Marcello un entrepreneur, Giulio un designer affirmé, Stephen un manager suisse. Giulio, connaissant bien la robinetterie, propose à l’ami entrepreneur d’investir dans le secteur et explique les phases de production des robinets en laiton chromé mais Marcello, susceptible aux problèmes de l’environnement, refuse le laiton avec toutes ses implications et propose de fabriquer, premiers au monde, des robinets bain et cuisine écologiques en acier inoxydable massif. Le produit s’appellera MGS. Après une année de projets et de mise à point voici UNICO, premier robinet cuisine en acier inoxydable. La nouveauté ne manqua pas de susciter l’intérêt du marché et certains décrétèrent UNICO le meilleur robinet au monde. Successivement la gamme a été agrandie et achevée avec les modèles bain et une production cuisine complète tout en respectant les données originelles de qualité, précision, respect de l’environnement et fini impeccable.

MGS - MARINE GRADE STAINLESS STEEL

In 1997 we started our adventure as the first worldwide manufacturer of stainless steel faucets for domestic use.

Our goal was to manufacture faucets that would not leak lead into drinking water, therefore we decided to use solid stainless steel which is **100% lead free**.

We also wanted our faucets to have a low impact on the planet, being **fully recyclable** and with maximum durability. For this reason we decided to use AISI316L - Marine Grade Stainless steel.

AISI316L offers the **best resistance to oxidation and corrosion**.

In marine environments, by the ocean, for the boating industry, and for the outdoors in general, AISI316L is the ideal choice.

Nel 1997 iniziammo la nostra avventura quale primo produttore al mondo di rubinetteria a uso residenziale in acciaio inox.

Il nostro obiettivo era di produrre rubinetti che non rilasciassero piombo nell'acqua potabile e decidemmo così di utilizzare acciaio inox massiccio, **100% esente da piombo**. Eravamo inoltre determinati a creare dei prodotti a basso impatto ambientale, **pienamente riciclabili** e della massima durezza.

Decidemmo quindi di utilizzare l'AISI316L, acciaio inox marino con **massima resistenza alla corrosione**. In prossimità del mare, per l'industria della nautica e utilizzo all'esterno in genere, l'AISI316L rappresenta la scelta ideale.

1997 begannen wir unser Abenteuer als weltweit erster Hersteller von Edelstahlarmaturen für den privaten Gebrauch.

Unser Ziel war es, Armaturen herzustellen, die kein Blei in das Trinkwasser abgeben, also entschieden wir uns für die Verwendung von massivem, **100 % bleifreiem Edelstahl**.

Wir waren entschlossen, Produkte mit geringer Umweltbelastung, **vollständig recycelbar** und mit maximaler Haltbarkeit zu schaffen. Wir haben uns daher für die Verwendung von AISI316L entschieden, einem Marine-Edelstahl mit **maximaler Korrosionsbeständigkeit**.

In Meeresnähe, für die Schiffsindustrie und den allgemeinen Außeneinsatz ist der AISL316 die ideale Wahl.

En 1997, nous avons commencé notre aventure en tant que premier fabricant au monde de robinets en acier inoxydable à usage résidentiel.

Notre objectif était de produire des robinets qui ne relâchaient pas le plomb dans l'eau potable, nous avons donc décidé d'utiliser de l'acier inoxydable solide, **100 % sans plomb**.

Nous étions également déterminés à créer des produits à faible impact environnemental, **entièrement recyclables** et avec une durabilité maximale.

Nous avons donc décidé d'utiliser AISI316L, un acier inoxydable marin avec une **résistance maximale à la corrosion**.

Proche de la mer, pour l'industrie maritime et l'utilisation générale en extérieur, l'AISL316 est le choix idéal.

Minimal

The Minimal Collection is defined by its sleek lines, smooth surface, and unique design while paired with perfectly proportioned round lever handles for ultimate function and timeless design.

La collezione Minimal è definita dalle sue linee pulite, dalla superficie liscia e dal design unico, abbinata a maniglie a leva rotonde perfettamente proporzionate per la massima funzionalità e un design senza tempo.

Die Minimal-Kollektion zeichnet sich durch ihre schlanken Linien, die glatte Oberfläche und das einzigartige Design aus, gepaart mit perfekt proportionierten runden Hebelgriffen für ultimative Funktion und zeitloses Design.

La collection Minimal se définit par ses lignes épurées, sa surface lisse et son design unique, tout en étant associée à des poignées à levier rondes parfaitement proportionnées pour une fonction ultime et un design intemporel.

WHY SOLID STAINLESS STEEL?

The beauty and features of stainless steel made it the perfect choice for many sculptures and landmarks such as the pinnacle of the Chrysler building in New York, the Gateway Arch that defines the St. Louis skyline and the Atomium in Brussels. The same characteristics make it the best choice for many industrial and commercial applications including production of high quality fixtures for the bathroom, kitchen and outdoors.

In 1998 MGS manufactured the very first stainless steel mixer for domestic use. No other manufacturer before MGS used it for this purpose due to costs and technical difficulties: stainless steel is more expensive than brass and complex to exploit due to its hardness and higher melting temperature. These factors did not stop MGS because the goal was to offer our customers the best possible products. The following is a partial list of the exceptional advantages that stainless steel offers.

- It is 100% lead free, which allowed MGS to be the first European manufacturer to be certified in compliance with NSF61 Annex G. This also met the low lead requirements of the U.S. Safe Drinking Water Act, which went into effect in January 2014.
- The finish is obtained through hand polishing rather than through chemical processes such as chroming or plating. Polished stainless is extremely scratch resistant and durable.
- It is 100% recyclable and a high percentage of it comes from recycled material (approximately 60%).
- Stainless steel does not release nickel and therefore it is ideal for people allergic to it.
- The non-porous surface is more resistant to bacteria and germs making it a more hygienic choice in the kitchen or bathroom.
- It is ideal for outdoor installation as stainless steel is resistant to oxidation.
- It guarantees a long life cycle, making it the least expensive choice in the long run.

Some competitors now use stainless steel sheet or tubes to cover an inner brass body. This shortcut may provide the possibility to keep production costs lower while offering some of the advantages mentioned above, but clearly not all!

I VANTAGGI DELL'ACCIAIO INOX

La bellezza, durezza e durata dell'acciaio inossidabile ne hanno motivato la scelta per la realizzazione di strutture architettoniche quali il pinnacolo dell'Empire State Building a New York e il monumentale atomo di Bruxelles. Le caratteristiche estetiche e qualitative fanno dell'acciaio inossidabile un materiale particolarmente adatto per rubinetti da bagno, da cucina e per esterni. Nessun fabbricante l'aveva mai preso in considerazione prima di MGS perché caro e dalla lavorazione complessa. Questa è una lista delle prerogative che offre l'acciaio inossidabile:

- È completamente esente da piombo, ciò ha permesso a MGS di essere il primo fabbricante europeo a ottenere la certificazione NSF61-G che vieta la presenza di piombo nei rubinetti per acqua potabile. La norma è entrata in vigore il 1. Gennaio 2014 in tutti gli Stati Uniti perché il piombo è un metallo tossico, nocivo alla salute e all'ambiente.
- È 100% riciclabile e circa il 60% di acciaio è ottenuto da prodotto riciclato.
- La finitura è ottenuta tramite lucidatura a mano, più onerosa ma più duratura e meno deteriorabile della cromatura.
- La superficie non porosa resiste a germi e batteri per una maggiore igiene in cucina e in bagno
- Non rilascia nichel ed è quindi indicato per le persone allergiche a questo metallo.
- Particolarmente resistente all'ossidazione, è ideale per l'utilizzo all'aperto.
- È la scelta più economica per la sua durata nel tempo.

Alcuni fabbricanti usano rivestire in acciaio i loro prodotti in ottone ma si tratta ovviamente di accorgimenti estetici che nascondono pur sempre un cuore in ottone.

WARUM SOLIDER EDELSTAHL

Wegen der Schönheit und der tollen Eigenschaften von Edelstahl ist dieses Metall die beste Wahl für viele Skulpturen und Sehenswürdigkeiten weltweit, so die Spitze des Chrysler Building in New York, der Gateway Arch in St. Louis, um nur einige zu nennen.

Die gleichen Eigenschaften empfehlen Edelstahl für viele industrielle oder kommerzielle Anwendungen, einschließlich der Produktion qualitativ hochwertiger Armaturen im Haushalt.

Die Komplexität der Edelstahlbearbeitung konnte MGS jedoch nicht von dem einmal eingeschlagenen Projekt abbringen, denn das Ziel war und ist, den Kunden das bestmögliche Produkt anzubieten.

- MGS Armaturen aus Edelstahl sind zu 100% bleifrei, MGS war der erste europäische Hersteller mit Zertifizierung nach dem amerikanischen NSF61 Annex G Standard. Damit erfüllt MGS auch die Anforderungen des US Safe Drinking Water Act, der seit dem Januar 2014 gilt.
- Die Oberflächen werden per Hand bearbeitet und poliert. Umweltkritische chemische Prozesse wie Verchromung oder Beschichtung entfallen vollständig. Dabei sind die gebürsteten und polierten Edelstahl Oberflächen extrem unempfindlich gegen Kratzer und somit lange haltbar.
- MGS Edelstahlaraturen sind zu 100% recyclebar, etwa 60% des Vormaterials besteht aus Recycling Material.
- Edelstahl ist für Menschen mit z.B. Nickelallergie ein absolut unkritischer Werkstoff
- Die kompakte, nicht poröse Oberfläche macht Edelstahl unempfindlich gegen bakterielle Ablagerungen und Verkeimung.
- Edelstahl ist der ideale Werkstoff für outdoor Installationen, da er eine sehr hohe Korrosionsbeständigkeit besitzt und leicht zu pflegen ist.
- Edelstahl hat eine sehr lange Lebensdauer.

Manche Hersteller verwenden heute Edelstahl Hüllen mit Messingbauteilen im Inneren. Aber diese Lösungen mit etwas geringeren Fertigungskosten bieten den Verbrauchern nicht alle Vorteile des massiven Originals von MGS.

AVANTAGES DE L'ACIER INOXYDABLE

La beauté, la dureté, l'incorruptibilité sont les raisons pour lesquelles certaines structures architectoniques ont été réalisées en acier inoxydable. Il faut rappeler par exemple le sommet de l'Empire State Building de New York, l'Atomium de Bruxelles, le Skyline de St.Louis aux Etats Unis, etc.... Les avantages de l'acier inoxydable sont très intéressants pour la robinetterie bain, cuisine, plein air et bord de mer. Aucun fabricant avant MGS avait utilisé l'acier inoxydable à cause de son coût et de sa dureté qui cause des difficultés de fabrication par rapport au laiton qui contient du plomb et est pour cela moins dur et plus malléable. Le plomb est un métal très toxique. Evidemment un robinet en laiton peut délivrer des traces de plomb dans l'eau. L'acier inoxydable n'a pas de plomb et est 100% recyclable. Il est intéressant de savoir qu'environ 60% de l'acier est obtenu par le recyclage.

Les robinets MGS sont polis à la main à l'aide de brosses pour obtenir un fini brillant ou mat qui restera pour toujours. Les robinets en laiton sont au contraire chromés et peuvent jaunir après usage.

La superficie de l'acier inoxydable n'est pas poreuse et résiste aux bactéries pour une meilleure hygiène des bains et cuisines. L'acier inoxydable ne contient pas de nickel et convient à toute personne allergique à ce métal.

Penta

The elegant simplicity of Penta is defined by the handles, resulting in five concave facets that form an attractively ergonomic pentagon while offering sleek lines.

L'elegante semplicità di Penta è definita dalle maniglie, risultanti in cinque sfaccettature concave che formano un pentagono elegantemente ergonomico offrendo al tempo stesso linee eleganti.

Die elegante Schlichtheit von Penta wird durch die Griffe definiert, die zu fünf konkaven Facetten führen, die ein attraktiv ergonomisches Fünfeck bilden und gleichzeitig schlanke Linien bietet.

L'élégante simplicité de Penta est définie par les poignées, résultant en cinq facettes concaves formant un pentagone élégamment ergonomique tout en offrant des lignes élégantes.

Ergon

The Ergon Collection is defined by its sleek lines and unique design while paired with perfectly proportioned refined precision machining knurled handles for ultimate function and industrial design.

La collezione Ergon è definita dalle sue linee eleganti e dal design unico, abbinata a maniglie zigrinate con lavorazione di precisione raffinata e perfettamente proporzionata per la massima funzionalità e design industriale.

Die Ergon-Kollektion zeichnet sich durch ihre schlanken Linien und ihr einzigartiges Design aus, gepaart mit perfekt proportionierten, gerändelten Griffen mit raffinierter Präzisionsbearbeitung für ultimative Funktion und Industriedesign.

La collection Ergon se définit par ses lignes épurées et son design unique, tout en étant associée à des poignées moletées d'usinage de précision parfaitement proportionnées pour une fonction ultime et un design industriel.

FINISHES

The PVD finishes Black Steel, Bronze, Titanium and Light Gold give a sophisticated touch to MGS's architectural and sleek designs. The finishes are available on matte stainless steel as the hand polished finish remains visible after the PVD process. Used for high tech, military and aerospace industries as well as for jewelry, the PVD process allows color to penetrate the stainless steel surface by molecular bonding, resulting in a smooth durable finish.

Le finiture Black Steel, Bronze, Titanium and Light Gold rendono ancora più unici ed esclusivi i prodotti MGS.

Ottenute con processo PVD, sono disponibili su acciaio satinato. Il trattamento PVD modifica il colore della superficie grazie alla fusione di particelle a livello molecolare.

L'acciaio non viene ricoperto da uno stato aggiuntivo di vernice: questo fa sì che viene mantenuta la finitura originale satinata o lucida.

Il PVD è utilizzato nell'industria bellica e aerospaziale, ma anche per la produzione di gioielli.

Die PVD-Oberflächen Black Steel, Bronze, Titanium and Light Gold verleihen den architektonischen und eleganten Designs von MGS eine raffinierte Note.

Die Oberflächen sind auf mattem Edelstahl erhältlich, da die handpolierte Oberfläche nach dem PVD-Prozess sichtbar bleibt.

Das PVD-Verfahren wird in der High-Tech-, Militär- und Luft- und Raumfahrtindustrie sowie für Schmuck eingesetzt und ermöglicht das Eindringen der Farbe in die Edelstahloberfläche durch molekulare Bindung, was zu einer glatten, dauerhaften Oberfläche führt.

Les finitions PVD Black Steel, Rose Gold, Titanium et Yellow Gold donnent une touche sophistiquée aux designs architecturaux et élégants de MGS.

Les finitions sont disponibles sur acier inoxydable mat car la finition polie à la main reste visible après le processus PVD.

Utilisé dans les industries de haute technologie, militaire et aérospatiale ainsi que pour la bijouterie, le procédé PVD permet à la couleur de pénétrer dans la surface de l'acier inoxydable par liaison moléculaire, ce qui donne une finition lisse et durable.

Black Steel

Die Ausführungen in Black Steel, Bronze, Titanium, und Light Gold machen die MGS Produkte einzigartig und exklusiv. Mit dem PVD Prozess hergestellt sind sie mit gebürsteten Finish erhältlich. PVD hat viele Vorteile gegenüber der Lackierung da die Farbe durch einen molekularen Prozess in das Metall eindringt und der von Hand polierte Finish hervorgehoben wird. PVD wird in der Rüstungsindustrie, der Schmuckindustrie sowie in der Luft- und Raumfahrt verwendet.

Titanium

Bronze

Light Gold

Les finitions en Black Steel, Bronze, Titanium, et Light Gold réalisées avec le processus PVD sont tout ce qu'il y a de plus unique et exclusif. Le processus PVD provoque une liaison chimique qui pénètre les molécules de l'acier inoxydable sans en altérer la finition.

Le PVD est utilisé sur des produits de très grande technologie ainsi que pour l'industrie aérospatiale et les bijoux.

THE GREEN CHOICE

Stainless steel is an eco-friendly material, in fact it is 100% recyclable and approximately 60% of it comes from recycled material. This percentage is expected to increase in the future. In case that, in spite of its high recyclability, a stainless steel object should end into a disposal site, unlike many other metals it will have no damaging effects on soil and water. Unlike typically used brass, stainless steel does not contain any lead, a poisonous metal that is gradually being abandoned for its detrimental impact.

Stainless steel objects have a very long life cycle. Most likely many years from now, when you will be getting tired of the style of your bathroom, your MGS fixtures will still be as beautiful as when you purchased them.

The MGS production process is extremely clean and eco-friendly. A typical fixture is going to be plated to a polished chrome or matte finish, this process produces toxic wastes that must be properly treated. The beautiful and long lasting finish of our stainless steel fixtures is obtained through hand polishing, a completely non polluting process.

L'acciaio inossidabile è ecologico, al 100% riciclabile e circa il 60% della produzione mondiale deriva da materiale riciclato: percentuale destinata a crescere. Diversamente da altre leghe, se dell'acciaio fosse abbandonato in natura non ne deriverebbe nessun danno all'ambiente, al terreno o alle falde acquifere: l'acciaio inossidabile non si deteriora e non inquina.

Il processo di produzione di MGS è pulito e ecologico: un comune rubinetto viene cromato col rischio di provocare rifiuti tossici dannosi mentre i nostri rubinetti in acciaio inossidabile sono unicamente lucidati a mano.

Gli oggetti in acciaio inossidabile sono di durata praticamente illimitata e quando vi sarete stancati del vostro bagno e vorrete rinnovarlo, la vostra rubinetteria in acciaio inossidabile sarà ancora come nuova, inalterata.

Rostfreier Edelstahl ist ein umweltfreundliches Material, es ist zu 100% recyclebar und es besteht tatsächlich zu 60% aus recycletem Material. Man geht davon aus, dass sich dieser Prozentsatz in der Zukunft noch erhöht. Sollte wirklich mal ein Produkt aus Edelstahl in der Mülltonne landen - trotz seiner hohen Wiederverwertungsmöglichkeiten, stellt dies im Gegensatz zu vielen anderen Metallen, keine Gefahr für die Umwelt (Erdboden) und das Trinkwasser dar. Im Gegensatz zu anderen Metallen enthält Edelstahl kein Blei, ist somit nicht giftig und hat keine schädlichen Auswirkungen. Gegenstände aus Edelstahl besitzen eine lange Lebensdauer. Sollten Sie in ferner Zukunft eine Modernisierung Ihres Badezimmers vornehmen, wird Ihre Edelstahlarmaur noch genau so schön wie am ersten Tag sein. Die Produktion der MGS Edelstahl Armaturen ist sauber und umweltfreundlich. Matt oder glänzend polierte Chromarmaturen erhalten ihr Finish durch eine Legierung, bei der giftige Rückstände entstehen, die sorgfältig entsorgt werden müssen. Unsere MGS Armaturen gelangen zu ihrer strahlenden und langlebigen Vollendung durch reine Handarbeit und sind damit komplett umweltfreundlich.

L'acier inoxydable est écologique, 100% recyclable et environ 60% de la production mondiale est obtenue par le recyclage qui est destiné à augmenter ultérieurement. Abandonné dans la nature, l'acier inoxydable ne détériore pas et ne cause absolument pas de dégâts au terrain et à l'eau.

Le processus de fabrication chez MGS est tout à fait écologique d'autant plus que les pièces ne sont pas chromées comme pour les robinets en laiton où des résidus de chrome dans le terrain peuvent créer de sérieux problèmes. Les robinets MGS sont uniquement polis à l'aide de brosses. L'acier inoxydable ne détériore pas avec le temps.

CB Shower

The sleek lines, smooth surface, and perfectly proportioned levers handles make this design a timeless beauty for your home spa or poolside retreat.

Le linee eleganti, la superficie liscia e le maniglie delle leve perfettamente proporzionate rendono questo design una bellezza senza tempo per la tua spa domestica o per il ritiro a bordo piscina.

Die schlanken Linien, die glatte Oberfläche und die perfekt proportionierten Hebelgriffe machen dieses Design zu einer zeitlosen Schönheit für Ihr Spa zu Hause oder Ihren Rückzugsort am Pool.

Les lignes épurées, la surface lisse et les poignées à levier parfaitement proportionnées font de ce design une beauté intemporelle pour votre spa à domicile ou votre retraite au bord de la piscine.

OUTDOOR

Being produced in marine grade solid stainless steel AISI 316 L, the entire MGS range is ideal for outdoor installation. Stainless steel is extremely resistant to oxidation, but in the event of superficial oxidation, the use of specific stainless steel cleaners can restore the finish to its original flawless state. Chrome plating on the contrary once impaired cannot be restored.
MGS - Timeless beauty indoor and outdoor.

L'intera gamma MGS è in acciaio inossidabile massiccio AISI 316 L, resistente all'ossidazione e pertanto adatta all'installazione all'aperto. Qualora dovessero palesarsi tracce di ossidazione, appositi liquidi per la pulitura dell'acciaio gli restituiscono l'originale brillantezza. Diversamente dall'acciaio inossidabile, le cromature intaccate sono irrecuperabili.
Rubinetteria MGS, bellezza inalterata nel tempo.

Da die gesamte Produktpalette in Edelstahl AISI 316 L produziert wird, sind die Produkte hervorragend für die Benutzung im Außenbereich geeignet. Edelstahl ist extrem widerstandsfähig gegen Korrosion, jedoch kann es manchmal zu oberflächlicher Korrosion kommen, die sich jedoch mit einem speziellen Pflegemittel entfernen lässt. So erstrahlen die Armaturen wieder in ihrem ursprünglichen Glanz. Verchromte Armaturen hingegen, die einmal oxidiert sind, lassen sich nicht mehr in ihren ursprünglichen Zustand versetzen. MGS - zeitlose Schönheit für den Innen - und Außenbereich

Toute la gamme MGS est en acier inoxydable massif AISI 316 L, elle résiste à l'oxydation et est particulièrement indiquée pour l'installation en plein air. Si jamais des traces superficielles d'oxydation se vérifient, il est suffisant de nettoyer la surface à l'aide d'un liquide pour l'acier et le robinet MGS retourne tout à fait neuf.

POLISHED STAINLESS STEEL

All products of the kitchen collection are also available in polished stainless steel. This elegant finish is obtained by refined hand polishing over the matte finish. Polished Stainless Steel, is the ideal choice in Marine environment.
To calculate pricing please apply 15% surcharge over the matte finish.

FINITURA LUCIDA

Tutti i modelli della collezione cucina sono altresì disponibili in acciaio lucido. Questa elegante finitura è ottenuta tramite un'ulteriore lucidatura a mano successiva alla satinatura. Acciaio inossidabile lucidato, è la scelta ideale nell'ambiente marino.
Per calcolare i prezzi si prega di applicare il 15% di sovrapprezzo sulla finitura satinata.

HOCHGLANZ EDELSTAHL

Alle Produkte der Küchen - Kollektion sind auch in poliertem Edelstahl erhältlich. Dieses elegante Finish wird durch zusätzliches, raffiniertes Handpolieren über dem matten Finish erreicht. Polierter Edelstahl, ist die ideale Wahl in der Meeresumwelt.
Für die Preiskalkulation berechnen Sie bitte einen Aufschlag von 15% auf die matte Oberfläche.

SURFACE BRILLANT

Tous les modèles de la collection cuisine sont également disponibles en acier poli. Cette finition élégante est obtenue par un polissage à la main supplémentaire suivant la finition satinée. L'acier inoxydable brillant, est le choix idéal dans l'environnement marin.
Pour calculer les prix nous vous prions de ajouter le 15% de surcharge sur le finissage mat.

As a boutique manufacturer, MGS is driven by: perfectionism, commitment to the highest quality, pride in and passion for the product. Unlike our many competitors, we have never invested in mass production or sought ways to do things faster and cheaper. Combining Swiss engineering standards with Italian design, our goal is to do things better and to be innovative. Every single part of our faucets is made of solid stainless steel that we shape with computerized machines. The goal of our very strict quality standards is to combine the parts with infinitesimal precision, which will provide for a perfect assembly and a long lasting smooth and flawless use. Prior to the final assembly the parts are hand polished to a matte or shiny finish by our master stainless steel polishers. This particular procedure requires skills and know-how that are typical of the region where MGS is located. The seamless finish of the separate parts guarantees that the final product will have an impeccable finish throughout the surface. The faucet is finally ready for assembly and packaging. Numerous quality controls take place during the process: after machine tooling, polishing, assembly, and final packaging. Every step of the manufacturing process is carefully monitored to ensure that the strictest quality standards are respected. Our small dynamic team is extremely swift and flexible, which allows us to follow up on special custom-made product requests very quickly.

LA PRODUZIONE

MGS è una boutique della rubinetteria che concepisce e produce rubinetti esclusivi di qualità superiore: non ci dedichiamo né siamo interessati ai grandi numeri che andrebbero a discapito del concetto di produzione limitata ma di altissima qualità. Combinando lo standard ingegneristico svizzero e il design italiano, il nostro obiettivo è di creare prodotti migliori e innovativi. Le varie parti dei nostri rubinetti sono in acciaio inossidabile che modelliamo con torni elettronici ad alta precisione, ottenendo assemblaggi perfetti per un uso morbido e duraturo del prodotto. Prima dell'assemblaggio finale, le varie parti che compongono il rubinetto sono lucidate a mano da esperti lucidatori che grazie alla loro esperienza e precisione garantiscono al prodotto finito un aspetto omogeneo. Rigorosi controlli di qualità sono effettuati durante tutto il ciclo di lavorazione per accertare che ogni parametro funzionale ed estetico venga rispettato.

PRODUKTION

Als Manufaktur sind die Leitlinien bei MGS Perfektionismus, dem absoluten Willen zu höchster Qualität, das stete Streben nach Präzision und Stolz auf das Produkt. MGS hat nie an Massenproduktion gedacht und versucht, Produkte schneller und billiger herzustellen. Mit der Kombination aus Schweizer Ingenieurskunst und italienischem Design streben wir nach steten Verbesserungen unserer Produkte sowie innovativer Lösungen.

Jedes Einzelteil unserer Armaturen ist aus solidem Edelstahl. Die Bearbeitung erfolgt auf speziellen, computergestützten Maschinen. Das Ziel ist, unsere hohen Qualitätsstandards mit maximaler Präzision zu kombinieren. Dies sehen wir als Voraussetzung für eine lange und einwandfreie Funktion über den Lebenszyklus der Armaturen.

Vor dem endgültigen Zusammenbau werden die einzelnen Teile von Spezialisten mit Hand gebürstet und poliert, bis die gewünschte Oberflächenqualität erreicht ist. Dieser Prozess erfordert sehr viel Erfahrung und Know How, wie es allerdings für unsere Region typisch ist.

Der nahtlose Übergang der verschiedenen Teile garantiert, dass die Armatur eine makellose Oberfläche erhält. Nach der Oberflächenveredelung sind die Teile fertig vorbereitet für die Endmontage, Qualitätskontrolle und Verpackung.

Qualitätskontrollen finden ständig schon im frühen Stadium der Produktion und nach allen Verarbeitungsschritten statt.

Unser kleines Team ist extrem flexibel und hoch spezialisiert, so dass wir schnell und zuverlässig auch auf besondere Kundenwünsche reagieren können um den Kunden auch Ihre individuelle MGS Armatur herstellen zu können.

PRODUCTION

MGS est une boutique qui privilège les petites séries à la grande production ayant pour objectif la précision dans l'assemblage et la qualité absolue. Toutes les pièces qui forment un robinet MGS sont travaillées sur des tours électroniques qui délivrent des composants ayant une précision infinitésimale pour un assemblage sans aucun jeu. Chaque pièce est polie à la main pour un fini brillant ou mat avant même d'être assemblée. Un robinet MGS se transmet dans la famille pour toujours.
